## Foot and Ankle Strengthening Exercises

Maintaining strong and stable, yet adaptable feet and ankles is crucial for overall mobility and preventing injuries. Whether you're an athlete, a fitness enthusiast, or simply someone looking to keep fit, incorporating targeted exercises into your routine can make a significant difference. Here are six effective exercises to strengthen your feet and ankles!

### Toe Taps:

- Sit comfortably on a chair with your feet flat on the floor.
- Lift your toes while keeping your heels on the ground, creating a tapping motion.
- Lower your toes back to the ground.
- Repeat for 15-20 taps for three sets.

### Benefits:

Toe taps help improve toe dexterity and strengthen the

muscles in the tops of your feet, enhancing overall foot stability.

### Calf Raises:

- Stand with your feet hip-width apart.
- Slowly rise onto the balls of your feet, lifting your heels off the ground.
- Hold the raised position for a moment.
- Lower your heels back down.
- Repeat for 15-20 repetitions for three sets.

### Benefits:

Calf raises target the muscles in your calves, which play a crucial role in ankle stability and help prevent injuries like sprains.

### Ankle Circles:

- Sit or stand comfortably with one leg lifted off the ground.

## Foot and Ankle Strengthening Exercises (Cont'd from previous page)

- Rotate your ankle in a circular motion, clockwise and then counterclockwise.
- Perform 10 circles in each direction.
- Switch to the other leg and repeat.

### Benefits:

Ankle circles enhance joint mobility, strengthen the muscles surrounding the ankle, and improve overall flexibility.

### Resistance Band Exercises:

- Sit on the floor with your legs extended.
- Loop a resistance band around a fixed point and the ball of your foot.
- Flex and point your foot against the resistance of the band.
- Perform 15-20 repetitions for three sets on each foot.

### Benefits:

Resistance band exercises target the muscles in the feet and ankles, providing resistance to build strength and stability.

### Marble Pickup:

- Place marbles on the floor and a small container next to them.
- Sit comfortably with your feet on the marbles.
- Use your toes to pick up the marbles and drop them into the container.
- Repeat until all marbles are transferred.

### Benefits:

Marble pickups improve toe strength and coordination, contributing to better balance and stability.

### Heel-to-Toe Walk:

- Stand with your feet in a straight line, heel to toe.
- Take small steps, ensuring your heel touches the toe of the opposite foot with each step.
- Walk forward for 20 steps and then backward for another 20 steps.

## Foot and Ankle Strengthening Exercises (Cont'd from previous page)

### Benefits:

This exercise promotes balance and stability by challenging the coordination of your foot and ankle muscles.

Incorporating these exercises into your regular fitness routine can help you build strength, stability, and flexibility in your feet and ankles.

However, if you have pre-existing foot conditions, it's advisable to consult with a healthcare professional or a physical therapist before starting a new exercise program. ♦

## Stair Climber Machines

Stair climber machines have become a staple in gyms and home fitness setups, offering individuals a challenging cardiovascular workout. Mimicking the motion of climbing stairs, these machines engage various muscle groups. However, like any exercise equipment, they come with advantages and potential risks.

### *What are Stair Climber Machines?*

Stair climber machines, also known as stair steppers, are devices designed to simulate the act of climbing stairs. They typically consist of two footplates that move up and down, challenging users to lift their legs against resistance. The intensity of the

workout can be adjusted by modifying the speed and resistance settings.

### *Benefits*

- **Cardiovascular Health:** Stair climbers provide an excellent cardiovascular workout, helping to improve heart health and increase stamina.
- **Calorie Burn:** The vertical motion engages major muscle groups, resulting in an effective calorie-burning workout
- **Low-Impact Option:** Stair climbers offer a low-impact alternative to activities like running, making them gentler on the joints while still providing an intense workout

## Stair Climber Machines (Cont'd from previous page)

- **Muscle Engagement:** The climbing motion targets the glutes, quadriceps, hamstrings, and calves, toning and strengthening lower body muscles

### *Risks*

- **Overexertion:** Intense workouts on stair climbers may lead to overexertion, potentially causing fatigue, muscle soreness, or injury
- **Balance Challenges:** Users must maintain balance on moving footplates, posing a risk of falling if not used with caution
- **Impact on Knees and Joints:** While generally low-impact, excessive use or incorrect form can cause discomfort or injury in the knees and joints

Stair climbers are considered low-impact, but individuals with pre-existing joint conditions should exercise caution. Proper form and gradual progression are crucial to minimizing the risk of joint discomfort.

### *Should You Use a Stair Climber Machine If You Have a Foot Condition?*

Individuals with foot conditions, such as plantar fasciitis or Achilles tendonitis, should consult with a healthcare professional before using a stair climber.

While the low-impact nature can be beneficial, it's essential to ensure that the specific condition won't be exacerbated by the repetitive motion.

For those with foot conditions, consulting a chiroprapist is advisable before embarking on any exercise plan.

In conclusion, stair climber machines offer a versatile workout option for those seeking cardiovascular benefits and lower body toning. However, users should be aware of potential risks, especially if they have pre-existing conditions. ♦

## 2023 Questionnaire results

We have compiled the feedback that we have received for our patients during 2023. We are proud to have received such great feedback and are happy to share these with you below:

Thanks for your support!

We thank all our patients for their ongoing feedback and comments to us which help us develop, hone and improve The Footcare Centre and the family foot care we deliver.

We are proud to have received such great feedback and we have compiled our latest feedback statistics for you and present it here.

All new patients seen Jan-Dec 2023 were surveyed and of those returning surveys, these are our performance results:

Questions put to Patients	% of Patients scoring: Good or Excellent
	2023
How well the clinic ran to time?	99.3%
The overall office environment?	100%
Were there clear explanations during your treatment that you could understand?	98.6%
The professionalism of the person you saw?	100%
The personal manner of our team?	100%
How well did you feel your concerns were addressed / treated at your appointment?	100%
Were you given a clear treatment plan or action plan?	99.3%
How do you feel about the quality of the visit overall?	99.3%

2023 figures based on 144 questionnaires received between Jan 2023 and Dec 2023.

## Clinical Placement site

We are excited to be providers of external placements for students on the Advanced Postgraduate Diploma in Chiropractic Program at The Michener Institute, University Health Network Toronto.

We look forward to having Justin Quach on site with us March 6<sup>th</sup> – April 18<sup>th</sup>.

Say hello to him when you are next in the office!
